

Robot Maths - Factorising into a single bracket

1) Work out the *highest common factor (HCF)* of all the terms

2) What do you multiply the HCF by to get the first term?

3) Repeat for the other terms

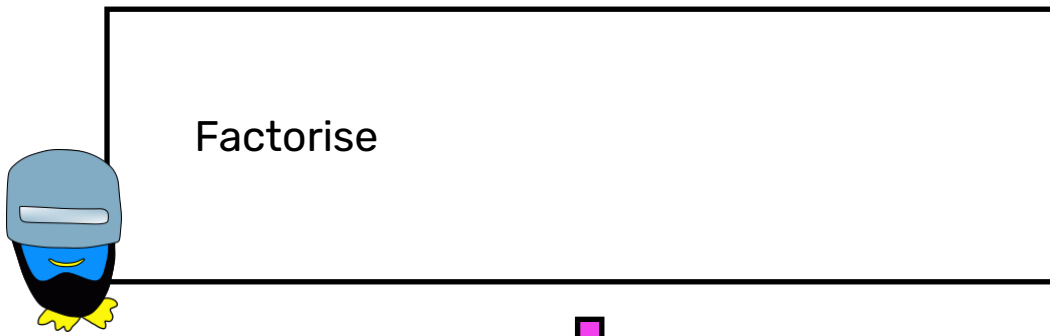

4) Make your final answer clear using a full number sentence

5) Check to see if it is right by expanding your answer
- it is correct if you end up with the expression you had at the beginning
