

Robot Maths - Volume (triangular prisms)

Example: Work out the volume of this triangular prism

Yes

Work out the area of the cross-section (the front face)

The area of a triangle is $\text{base} \times \text{height} \div 2$

Have the dimensions been given the same unit of measurement (e.g. are they all measured in metres)?

No

Convert the dimensions so that they have the same unit of measurement

Volume of a prism
= area of the cross-section \times length

Make your final answer clear using a full sentence, including the correct unit of measurement

The volume of the triangular prism is
